Wildflower Health
Mobile Quality Assurance/UAT Tester

About the Role
As the Mobile Quality Assurance (QA) Tester, you'll champion the quality of the mobile applications we deliver to our clients and users. You will also lead the testing of client configurations and integrations, as well as the testing of our content management system. This role requires experience across all QA functions, including: test strategy and plan creation, regression testing, performance testing, test environment management, functionality & usability testing, bug reporting, and tracking bug closure. You will work cross-functionally with our client services team, product team, and engineers, in a variety of ways to gain deep exposure to all aspects of our company.

Responsibilities

- Ownership of manual test cases and test case execution and test plans
- Participate in the planning and execution of all phases of Quality Assurance (IAT, UAT, post-release checks)
- Investigate and recreate reported defects
- Understand test data needs for mobile applications and create plans to ensure required test data is available when test execution begins for each phase, and in each environment
- Define and track QA metrics including coverage, quality & performance
- Maintain existing QA tools while becoming a key driver of helping set up automation tools and assist with the management of automated tests
- Gather and report metrics on scenario execution progress and defects opened during execution
- Ensure that the highest-level quality of testing performed by the QA team remains strong while being able to manage additional tasks
- Effectively communicate the status of specific projects across teams, highlighting issues or conflicts between teams
- Mobile testing experience on Android / iOS devices

About You
- You are a self-starter, and can independently manage your workload.

- You have previous experience in software development, quality assurance, or other related fields.
- You have strong root-cause analysis skills.
- You pay strong attention to details and deadlines.
- You have a demonstrated understanding and passion for healthcare and/or mobile health products.
- You are familiar with best practices in user flows and user experience.
- You are familiar with accessibility testing for mobile apps and standard accessibility guidelines.

About Wildflower Health

Wildflower Health produces mobile health programs that help families better connect to healthcare and help healthcare enterprises influence and support healthy consumer behaviors across a lifetime of health decisions. The company's mobile applications support women and their families to drive prevention, risk identification and connections to care right on the smartphone. The company's products support families during every life stage, from preconception and pregnancy, through pediatrics and adult health, supporting common episodes of care over time. Wildflower Health's applications are offered to consumers worldwide by leading health plans, hospitals and health systems, and employers.

Location

San Francisco, CA or Seattle, WA
