Software Engineer

Wildflower Health is seeking a full-stack engineer to join our growing team in San Francisco. We are building cloud services and web applications that support a great customer experience for our mobile users, and create a powerful platform that provides enterprise-level systems administration, content management, reporting and data analytics, and integrations with external customer and partner systems. As a digital health company we put an emphases on data security, and user privacy, and we are held to higher government standards (HIPAA) in that regard.

Because we are a small team, there are many opportunities to get hands on with many aspects of the software development, build, deploy, maintenance and monitoring process. Our core technologies are:

- RESTful service built on Node.js with Express/restify using TypeScript/JavaScript.
- Internal and client facing browser MVW applications utilizing Angular (7), also using TypeScript/JavaScript.
- MongoDB and MySQL database management systems.
- Nginx reverse proxying and asset serving for load balancing, fault tolerance and TLS termination.
- Container based development and deployment environments using Docker and Kubernetes (K8S).
- Continuous integration, deployment, and build automation using Jenkins and the Groovy language.
- AWS cloud hosting, storage, and network infrastructure.

We look forward to discussing this exciting career opportunity, and how you can be a valued contributor to the team.

Unfortunately, Wildflower Health is unable to provide visa sponsorship or offer relocation services at this time.

To Apply: Please send cover letter and resume to jobs@wildflowerhealth.com

More About Us:

Wildflower Health delivers mobile health programs that help healthcare payers and providers better connect with and support families, impacting both short-term decisions and longer-term behaviors that together bend the cost curve in healthcare.

Our products are catered to the family's chief medical officer, mom, who typically makes the healthcare decisions for the home. Our flagship product is Due Date Plus, a smartphone-based maternity program, reaches women early in pregnancy, keeps them engaged to identify risks, and connects them with providers or health plan care managers. Combining with Family Health, which continues through pediatrics through the full spectrum of family health, the whole family's health needs is organized in one convenient app.

Our Wildflower Health staff is hardworking and passionate about transforming healthcare. As part of our team, you'll help drive the evolution of our enterprise mobile solution. You'll be part of a team that combines an A+ customer experience for our mobile users and a powerful backend platform that integrates engagement analytics, enterprise systems management, A/B testing, and interfaces with client systems.

Our small, close-knit team values intelligence, dedication, and diversity of opinion. As a startup, things move quickly, but you'll find an atmosphere where people are respectful of each other and work-life balance is cherished.
